Mr Baker,

The Division has required the mine operator of the So Hansen mine to reclaim land in Draper that is not zoned for mining and has been disturbed. In the document it states "Subject Area". There are several large sections of the South Hansen mine which are improperly zoned for the use the mining operator is using them for. CR (Regional Commercial) adjacent to metro water and A-5 (Agriculture) radio tower mountain and the west face of steep mountain from the Salt Lake County park south to Section 24. Can you tell me which Subject Area the reclamation order refers to?

Also there are sections of draper in the Sage Canyon mine which the operator has no land disturbance permit. Will the same reclamation directive be extended to Sage Canyon Excavation?

The mine operator has stated they are very involved with the local municipalities at this time. They have requested and extension to March 31 for the reclamation assurity review. The mine operator has already been given many extensions on this review. Does the division plan on granting another extension?

Thank you
